

Train AI — Master Operational & Workflow Guide

A Complete Non-Technical Walkthrough of User Invitations, Course Delivery, Payments, Billing & Revenue Splits

Executive Overview: This document provides a complete, easy-to-understand breakdown of every key process in Train AI. It covers **User Onboarding & Invitations**, **Instructor & Course Publishing**, **Payment Execution (Paystack & Stripe)**, **Subscription Billing & Seat Licenses**, and **Revenue Split Percentages & Bank Payouts** — with zero technical developer jargon.

1. Platform Workspaces & User Roles

Train AI organizes users into three clean, dedicated workspaces:

Workspace	Target Users	Core Functions
Learner Experience	Employees, Students, Independent Learners	Enroll in courses, take quizzes, chat with the AI Coach, track personal skills, join study groups, and earn verified certificates.
Organization Hub	Company Executives, Admins, Managers, Instructors	Invite employees, manage seats, assign courses, build quizzes, track workforce analytics, set payment gateways, and configure permissions.
Platform Owner Portal	Central Train AI Operators	Monitor overall system health, manage enterprise pricing plans, set platform commission rates, and track global transactions.

2. The User Invitation & B2B Onboarding Flow

How a business signs up and adds employees to their company workspace step-by-step:

- **1. Company Sign Up:** A company executive creates the organization account on Train AI and inputs company details.
- **2. Purchasing Learner Seats:** The company purchases a bundle of **User Seats** (e.g. 50 seats). Each seat allows 1 employee to access the platform.
- **3. Sending Email Invitations:** The Company Admin enters employee email addresses in *People & Access* and selects their role (Manager, Instructor, or Learner).
- **4. Employee Acceptance:** The employee receives an official email invitation link. Clicking the link takes them to sign in or create their password.
- **5. Seat Deduction & Role Assignment:** Once accepted, 1 seat is automatically deducted from the company's available seat balance, and the employee is routed straight into their assigned workspace.
- **6. Role & Permission Control (RBAC):** Company Admins can adjust permissions anytime (e.g. allowing Instructors to issue certificates or create assessments).

3. The Instructor & Course Publishing Flow

How instructors build courses, deliver training, evaluate learners, and issue certificates:

- **1. Instructor Profile Setup:** Instructors set up their professional bio, teaching specializations, and portfolio in *Instructor Settings*.
- **2. Course Creation & Builder:** Instructors use the *Course Builder* to create structured courses with titles, descriptions, categories, video/text lessons, and attachments.
- **3. Quiz & Assessment Builder:** Instructors add multiple-choice practice quizzes and final course assessments with marked correct answers and point values.
- **4. Course Publishing & Access:** Courses can be published as **Free** (for all company staff), **Assigned** (mandatory for specific cohorts), or **Paid** (priced for external sale).
- **5. Cohorts & Student Engagement:** Instructors facilitate study cohorts, answer learner questions, and run discussion topics.
- **6. Automatic & Direct Certificate Issuance:** When a learner passes the final course assessment, Train AI automatically generates a verified digital certificate. Instructors can also directly grant certificates to deserving students.

4. The Payment Execution Flow (Paystack & Stripe)

How transactions are securely initiated, processed, and confirmed end-to-end:

- **1. Automatic Location & Currency Detection:** Train AI automatically detects the user's location and displays prices in their local currency (Naira ₦, US Dollars \$, Pounds £, Euros €, Cedi GH₵, Shillings KSh, Rand R).
- **2. Provider Checkout Redirection:** When a customer clicks *Buy Course*, *Upgrade Plan*, or *Purchase Seats*, the platform seamlessly connects to **Paystack** (African payments) or **Stripe** (International payments) hosted checkout pages.
- **3. Real-Time Secure Verification:** Once payment is completed on Paystack or Stripe, the gateway redirects back to Train AI. The platform runs a double-check verification to confirm exact payment amount and transaction reference.
- **4. Automated Fulfillment & Receipts:** Upon confirmation, the service immediately unlocks the purchased item (enrolling the student, adding seats, or upgrading the plan) and issues a receipt.

5. Billing, Subscriptions & Seat Licensing Flow

How companies manage subscription plans, user seat licenses, and AI credits:

Billing Item	How It Works	Billing Frequency
Starter Subscription	Unlocks core company features, course builder, up to 100 learner accounts, and 10 AI credits per user.	Monthly or Annual Renewal
Growth Subscription	Unlocks advanced workforce skill graphs, manager dashboards, custom branding, and up to 500 learner accounts.	Monthly or Annual Renewal
User Seat Packages	Companies buy additional seat licenses as their team grows. Unused seats remain available in company inventory.	One-time or Pay-as-you-grow
AI Credit Top-Ups	Companies buy extra credit packages to give their learners more AI Coach interactions and quiz generations.	On-demand Top-up

6. Percentage Revenue Split & Payout Flow

How money earned from course sales is automatically split and deposited into bank accounts:

- **1. Course Sale Initiated:** A learner purchases a paid course created by an instructor or training organization.
- **2. Platform Commission Split:** Train AI applies a standard platform fee percentage (e.g. 15% platform commission, 85% instructor payout).
- **3. Automated Gateway Subaccount Split (Paystack/Stripe):** If the organization has connected their **Paystack Subaccount** or **Stripe Connected Account ID** in *Settings Hub*, Paystack/Stripe automatically splits the money at checkout: Train AI receives the platform fee, and the remaining majority is deposited directly into the organization's connected bank account.
- **4. Direct Bank Settlement for Central Sales:** For sales collected centrally, earnings accumulate in the instructor's earnings dashboard. Instructors can request a direct bank payout to receive funds into their local bank account.
- **5. Complete Financial Tracking:** Both Platform Owners and Company Admins have transparent revenue reports showing total sales, gross income, platform fees, and net payouts.

7. AI Assistant, Credits & Community Flow

- **AI Neural Coach & Credit Consumption:** Learners ask questions or generate practice quizzes using the AI Coach. Each interaction uses 1 AI credit. Admins can top up credit balances or set custom manual auto-reply messages.
- **Cohorts & Collaborative Study Groups:** Learners join study cohorts led by instructors. They can chat, share study notes, and track progress together in privacy-safe group channels.
- **Gamification & Leaderboard Control:** Learners earn experience points (XP), maintain daily learning streaks, and unlock achievement badges. Company Admins can toggle leaderboard rankings on or off in Access Control.

Train AI Operational Guide — Designed for complete operational clarity, secure financial flows, and enterprise scaling.
